

A JOURNEY FROM SCIENCE TO SELF-ENQUIRY

GOD PLAYS DICE TWO LIGHTS

Science, Consciousness and the Search for Who I Am

By Dharma

Who Is the Observer?

The universe can be observed. But who is observing?

For more than four decades, the author has explored the physical world through science and engineering.

Yet an unexpected experience before a mirror raised a question that scientific equations alone could not answer. For a brief moment, he could see his reflection but did not recognise the person looking back.

Seeing remained. Recognition disappeared.

That experience began a journey into consciousness, memory, personal identity and the nature of the observer.

The Two Lights

The first light reveals the universe.

The second points toward the knowing of the universe.

The first light is physical light - electromagnetic radiation that illuminates the world and makes vision possible.

The second light is a metaphor for awareness - the knowing through which seeing, thinking and experience become known.

Physical light allows us to see the world.

But what allows us to know that we are seeing?

About the Book

God Plays Dice - Two Lights explores the relationship between modern science, consciousness and Eastern philosophy.

Drawing upon Einstein, quantum mechanics, the nature of matter and energy, and the teachings of Sri Ramana Maharshi, Patanjali and Advaita Vedanta, Dharma examines the distinction between the observable world and the observer.

The book does not claim that physics proves spirituality. Instead, it explores how scientific investigation and self-enquiry can illuminate different dimensions of the search for truth.

What am I seeking?

Who is seeking?

Who am I?

About the Author

Dharma is the pen name of a chemical engineer with more than four decades of experience in engineering and technology development.

His lifelong interest in science gradually developed into an enquiry into consciousness, perception and the nature of the Self.

Inspired by an unusual personal experience and the teachings of Sri Ramana Maharshi, he explores the relationship between scientific knowledge and spiritual self-enquiry.
